

The Future of General Aviation Arrives at Gloucestershire Airport

Gloucestershire Airport is currently at the forefront of a new wave of modern General Aviation aircraft. Amongst the newly arrived aircraft is a Tecnam twin engine aircraft, which belongs to resident flying school, Aeros. This is only the second aircraft of this type in the UK, and Gloucestershire Airport is very proud to welcome it.

Aeros General Manager, Dave Houghton, said 'We're very pleased to add the Tecnam to our fleet of aircraft. It will have a positive impact on both our business and customers, and we're delighted to be able to offer it for training.'

This new breed of modern aircraft uses less fuel, which will benefit the flying school, pilot and environment. It also creates far less noise emissions for the local community. It will keep costs lower for those wishing to pursue a hobby or career in aviation, which is a progressive step forward during these difficult economic times.
